QueuePro 250 Triple

MAXIMUM PEDESTRIAN CONTROL

The QueuePro 250 Triple is the world's first triple belt barrier! Designed to provide the maximum control of pedestrian flow the triple belt configuration increases the delineation between the runs in a queuing coral. Where separation of opposing pedestrian flows is important QueuePro 250 Triple is a lower cost alternative to using solid panels between posts. The lower belt cassettes are easily replaced in the field due to our unique 3 piece post construction.
